PREGLEDNICE S PODATKI

Part II

DATA TABLES

A. POVRŠINSKE VODE

A.0. Pojasnila k preglednicam

Poglavje o površinskih vodah (A) sestavlja poleg uvodnih Pojasnil (A.0.) še deset podpoglavij s preglednicami. V njih so prikazani osnovni podatki in rezultati meritev na vodomernih postajah, ki so delovale v mreži za površinske vode.

Razlage pojmov in okrajšav v preglednicah:

- Št.** – tekoča številka vodomerne postaje;
- Šifra** – šifra vodomerne postaje (po šifrantu Agencije Republike Slovenije za okolje);
- Tip** – opremljenost postaje: **V** – vodomerni, **A** – avtomatska merilna postaja, **L** – limnigraf, **P** – podatkovni zapisovalnik;
- Postaja** – ime kraja, kjer deluje vodomerna postaja. V kolikor se je mikrolokacija postaje spreminjala, je dodana rimska številka;
- Vodotok** – ime vodotoka, na katerem je vodomerna postaja;
- Kota »0«** – nadmorska višina kote »nulte« točke vodomerna (v metrih nad gladino Jadranskega morja);
– – ni podatka;
- Suho** – v profilu vodomerne postaje ni pretoka;
- F** – površina porečja gorvodno od profila vodomerne postaje (vodozbirno zaledje) – v km². Pri postajah na Bohinjskem oziroma Blejskem jezeru je navedena površina pojezerja;
- Stac.** – stacionaža (v km). Oddaljenost profila vodomerne postaje od izliva vodotoka (lahko tudi od državne meje, izbranega ponora);
- Zač. op.** – leto, v katerem se je na vodomerni postaji začelo opazovati (vsaj višine vodne gladine);
- Stran** – stran, na kateri so za vodomerno postajo navedeni podatki o vodostajih (**H**), pretokih (**Q**), temperaturi (**T**) ter o vsebnosti in premeščanju suspendiranega materiala (**SM**);
- Hnk** – najnižji vodostaj v letu (mesecu) – konica;
- Hnp** – najnižji vodostaj v letu (mesecu) – dnevno povprečje;
- Hs** – srednji vodostaj v letu (mesecu);
- Hvp** – najvišji vodostaj v letu (mesecu) – dnevno povprečje;
- Hvk** – najvišji vodostaj v letu (mesecu) – konica;
- nHnk** – najnižji nizek vodostaj v obdobju – konica;
- nHnp** – najnižji nizek vodostaj v obdobju – dnevno povprečje;
- vHvp** – najvišji visok vodostaj v obdobju – dnevno povprečje;
- vHvk** – najvišji visok vodostaj v obdobju – konica;
- Qnk** – najmanjši pretok v letu (mesecu) – konica;
- Qnp** – najmanjši pretok v letu (mesecu) – dnevno povprečje;
- Qs** – srednji pretok v letu (mesecu);

A. SURFACE WATERS

A.0. Explanation to the tables

The chapter on surface waters (A) consists of the introductory Explanation (A.0.) and ten sub-chapters with tables. In them basic data are listed, as well as the measurement results from gauging stations which were included in the surface water network.

Key to the terms and abbreviations used in the tables:

- Št.** (No) – current number of a gauging station;
- Šifra** (Code) – code of a gauging station (acc. to the code list Environmental Agency of the Republic of Slovenia);
- Tip** (Type) – station equipped with: **V** – staff gauge, **A** – automatic station, **L** – water-level recorder, **P** – data logger;
- Postaja** (Station) – name of the place where a gauging station operates; if the microlocation of a station was changed, Roman numeral is added;
- Vodotok** (Stream) – name of the stream on which a gauging station is located;
- Kota »0«** (Datum point) – the »zero« of the gauge altitude (in meters above the level of the Adriatic);
– – no data;
- Suho** (Dry) – the channel cross-section at the gauging station is dry;
- F** – the river basin area upstream of the channel cross-section at a gauging station (catchment area) – in sq km. At the gauging station of the lakes Bohinj and Bled, the stated area applies to their catchment basins;
- Stac.** – location (in km). Distance of the gauging station cross-section from the river mouth (also from the state border, or selected ponor);
- Zač. op.** (Beginning of observations) – the year in which observations at a gauging station were begun (at least observations of the water level);
- Stran** (Page) – the page on which the data are listed for a gauging station: on water levels (**H**); on discharges (**Q**); on temperature (**T**); on concentration of suspended material and quantities of transported suspended material (**SM**);
- Hnk** – the lowest annual (monthly) water level – extreme;
- Hnp** – the lowest annual (monthly) water level – daily average;
- Hs** – mean annual (monthly) water level;
- Hvp** – the highest annual (monthly) water level – daily average;
- Hvk** – the highest annual (monthly) water level – extreme;
- nHnk** – the minimum low water level in a period – extreme;
- nHnp** – the minimum low water level in a period – daily average;

Qvp – največji pretok v letu (mesecu) – dnevno povprečje;
Qvk – največji pretok v letu (mesecu) – konica;
nQnk – najmanjši mali pretok v obdobju – konica;
nQnp – najmanjši mali pretok v obdobju – dnevno povprečje;
vQvp – največji velik pretok v obdobju – dnevno povprečje;
vQvk – največji velik pretok v obdobju – konica;
Qi – *i* mesečni pretok, pretok, ki je zagotovljen *i* mesecev ($i = 0, 1, 2, \dots, 12$).

A.1. Seznam vodomernih postaj za površinske vode

V seznamu so navedene izbrane delujoče vodomerne postaje. Urejene so po povodjih in porečjih (Črnomorsko povodje: Pomurje, Podravje, Posavje; Jadransko povodje: Posočje, ostala porečja Jadranskega povodja) ter vodotokih. V okviru porečja so najprej navedene vodomerne postaje na glavnem vodotoku v smeri toka, sledijo postaje na pritokih, ki so prav tako razvrščeni glede na mesto izliva v glavno reko od njenega izvira proti izlivu. Od tega pravila odstopajo porečja Ljubljaničnice, Savinje in Krke, ki kot samostojna sledijo porečju Save. V njihovih okvirih si vodomerne postaje sledijo po enakem pravilu po toku navzdol.

V osnovna porečja so uvrščene tudi vodomerne postaje na kraških vodotokih, saj njihova hidrografska pripadnost večinoma ni sporna.

Pri Jadranskem povodju (brez porečja Soče) sledijo vodomernim postajam na Reki (Notranjska Reka) postaje na neposrednih pritokih Jadranskega morja, kakor si le ti sledijo od slovensko – italijanske do slovensko – hrvaške meje.

V seznam sta vključeni tudi vodomerni postaji na Blejskem in Bohinjskem jezeru.

Površina porečja (pojezerja) je določena na karti 1 : 25000. Pri kraških vodotokih so upoštevani rezultati sledenj podzemnih voda, na aluvialnih sedimentih pa hidroizohipse srednje gladine podzemne vode. V obeh primerih je podatek lahko sporen. V kolikor zaledja vodomerne postaje ni mogoče vsaj približno omejiti (obsežna conalna razvodnja, kraške in ostale pretočitve – na primer pri v. p. Vrhnika, Verd in Bistra), podatka ne navajamo (opomba: kras ali –).

Letnica pričetka opazovanj ne pomeni, da je niz opazovanj zvezen. Delovanje nekaterih postaj je bilo prekinjeno, podatki so lahko izgubljeni ali pa so bili že objavljeni (npr. Jahrbuch des Hydrographischen Zentralbureaus pred letom 1918).

A.2. Seznam meritev pretokov

V seznamu so objavljene vse meritve pretokov. Meritve se lahko izvajajo tudi izven mreže vodomernih postaj.

vHvp – the maximum high water level in a period – daily average;
vHvk – the maximum high water level in a period – extreme;
Qnk – the lowest annual (monthly) discharge – extreme;
Qnp – the lowest annual (monthly) discharge – daily average;
Qs – mean annual (monthly) discharge;
Qvp – the highest annual (monthly) discharge – daily average;
Qvk – the highest annual (monthly) discharge – extreme;
nQnk – the minimum low discharge in a period – the extreme;
nQnp – the minimum low discharge in a period – daily average;
vQvp – the maximum high discharge in a period – daily average;
vQvk – the maximum high discharge in a period – extreme;
Qi – *i*-month discharge; the discharge which is sure in *i* months ($i = 0, 1, 2, \dots, 12$).

A.1. The list of surface water gauging stations

In the list selected operated gauging stations are included. They are arranged according to the sea drainage basins, then the river basins (the Black Sea drainage basin: the Mura, Drava, Sava river basins; the Adriatic drainage basin: the Soča river basin and the rest of river basins of the Adriatic drainage basin), and streams. Within the frame of a river basin, gauging stations which are located on the main stream are listed first, in downstream direction; then follow the stations on the tributaries and they are also arranged as to the location of a tributary confluence with the main river, in the direction from the latter's source towards its mouth. Deviations from this rule occur in the cases of the Ljubljaničnica, Savinja and Krka river basins which are listed as three independent river basins, following the Sava river basin. Within their frames, gauging stations follow each other according to the same principle, i. e. downstream the river channel.

Gauging stations on the karst rivers are also included into the basic river basins, since their hydrographic classification is mostly not questionable.

In the Adriatic drainage basin (without the Soča river basin), gauging stations on the Reka (i. e. the Notranjska Reka river) are followed by the stations on the rivers flowing directly into the Adriatic, in the order as they follow one another from the Slovenian-Italian border to the Slovenian-Croatian border.

The list also includes the gauging stations on lakes Bled and Bohinj.

The area of a river basin is defined on a map of scale 1 : 25,000. With the karst rivers, the results of underground water tracing were taken into account, and on the alluvial sediments, contour lines of mean water tables were observed. In both cases, data can be disputable. If the

A.3. Mesečni in letni srednji vodostaji s konicami

V preglednici so natisnjeni mesečni in letni srednji vodostaji (višine vodnih gladin) ter mesečne, letne in obdobjne zabeležene konice celotnega obdobja opazovanj, brez tekočega leta (skrajne vrednosti, ekstremi).

Na vodomernih postajah, ki so opremljene z limnigrafom (tip = L), s podatkovnim zapisovalnikom (tip = P) ali na postajah z avtomatskim prenosom podatkov (tip = A), so mesečne in letne vrednosti določene oziroma izračunane na osnovi analognega ali digitalnega nivograma. **Nizek** vodostaj za mesec je **Hnk**, **srednji** vodostaj je **Hs**, **visok** vodostaj pa **Hvk**. Na vodomernih postajah, ki so opremljene z vodomerom (tip = V) so mesečni in letni vodostaji določeni na osnovi vsakodnevnih opazovanj trenutnih vrednosti. **Nizek**, **srednji**, **visok** vodostaj so **Hnp**, **Hs** in **Hvp**.

Letne vrednosti so izpisane posebej, konici pa sta opremljeni z datumom.

Zabeleženi konici v celotnem opazovanem obdobju sta na limnigrafskih postajah **nHnk** oziroma **vHvk**, na postajah z vodomerno letvijo pa **nHnp** oziroma **vHvp**.

A.4. Dnevni vodostaji z nivogramom

Za izbrane postaje je v letopisu objavljena preglednica z dnevnimi vodostaji, mesečnimi in letnimi vrednostmi ter nivogramom. Podatki so rezultat obdelave limnigramov (vse izbrane vodomerne postaje so opremljene z limnigrafom). Dnevne vrednosti so srednji dnevni vodostaji. Iz njih so izračunani srednji mesečni in letni vodostaji (**Hs**). S skrajnimi vrednostmi (**Hnk**, **Hvk**) so navedeni v spodnjem delu preglednice.

V nivogramu je s srednjimi dnevnimi vrednostmi prikazano spreminjanje vodostaja preko leta.

catchment area of a gauging station cannot be defined, approximately at least (large zonal watersheds, karstic and other bifurcations, e. g. gauging stations of Vrhnika, Verd, and Bistra), data are not listed (note: kras or –).

The year of the commencement of monitoring does not imply that the monitoring has been continuous. The operation of some stations was interrupted and data could have been lost or could have already been published (e. g. Jahrbuch des Hydographischen Zentralbureaus prior to 1918).

A.2. The list of regular discharge measurements

The list displays all measurements of flows. These measurements can also be carried out outside the water gauging stations network.

A.3. Monthly and annual mean water levels with extremes

The table displays monthly and annual mean water levels and monthly, annual and periodical recorded peaks of the entire period of observation, excluding the current year (extreme values). For the gauging stations equipped with water-level recorders (L type) or with data logger (P type) or stations with near real time data transfer (A type), monthly and annual values are defined or calculated on the basis of analog or digital level graph. **Hnk** stands for the monthly **low** water level, **Hs** for **mean** level, and **Hvk** for **high** water level. For those gauging stations which are equipped with staff gauges (V type) monthly and annual water levels are defined on the basis of daily registrations of current values. **Hnp** stands for **low**, **Hs** for **mean**, and **Hvp** for **high** water levels.

Annual values are listed separately, and dates are added to both extremes.

A.5. Mesečni in letni srednji pretoki s konicami

V preglednici so za izbrane delujoče vodomerne postaje objavljeni mesečni in letni srednji pretoki ter mesečne, letne in obdobjne zabeležene konice celotnega obdobja opazovanj, brez tekočega leta. Pretoki se ne določajo za postaje, ki nimajo pretočne krivulje (postaje na jezerih), ali če le-ta ni določena pri vseh vodostajih (postaje, ki jih dosežejo vode ob zajezitvi).

Na vodomernih postajah, ki so opremljene z limnigrafom (tip = L), s podatkovnim zapisovalnikom (tip = P) ali na postajah z avtomatskim prenosom podatkov (tip = A), so mesečne in letne vrednosti določene oziroma izračunane na osnovi analognega ali digitalnega nivograma in ustreznih pretočnih krivulj. Mali pretok za mesec je **Qnk**, srednji pretok je **Qs**, visok pretok pa **Qvk**. Na vodomernih postajah, ki so opremljene z vodomermom (tip = V), so mesečni in letni pretoki določeni na osnovi vsakodnevnih opazovanj trenutnih vodostajev. Nizek, srednji, visok pretok so **Qnp**, **Qs** in **Qvp**.

Letne vrednosti so izpisane posebej, konici pa sta opremljeni z datumom.

Zabeleženi ekstremi v celotnem opazovanem obdobju so na limnigrafskih postajah **nQnk** oziroma **vQvk**, na postajah z vodomerno letvijo pa **nQnp** oziroma **vQvp**. Pri vodomerni postaji Borl veljata navedeni skrajni vrednosti za obdobje po letu 1989, ko je postaja ponovno začela delovati. Leta 1981 so bila opazovanja za osem let prekinjena, podatki po l. 1989 pa, zaradi delovanja HE Formin, niso primerljivi s starimi.

A.6. Dnevni pretoki s hidrogramom in krivuljo trajanja

Za izbrane postaje je v letopisu objavljena preglednica z dnevnimi pretoki, mesečnimi in letnimi vrednostmi ter hidrogram s krivuljo trajanja. Podatki so rezultat obdelave limnigramov (vse izbrane vodomerne postaje

The two extremes in the observation period are marked with **nHnk** and **vHvk** for the stations with water-level recorders, and **nHnp** and **vHvp** for the stations with staff gauges.

A.4. Daily water levels with level graph

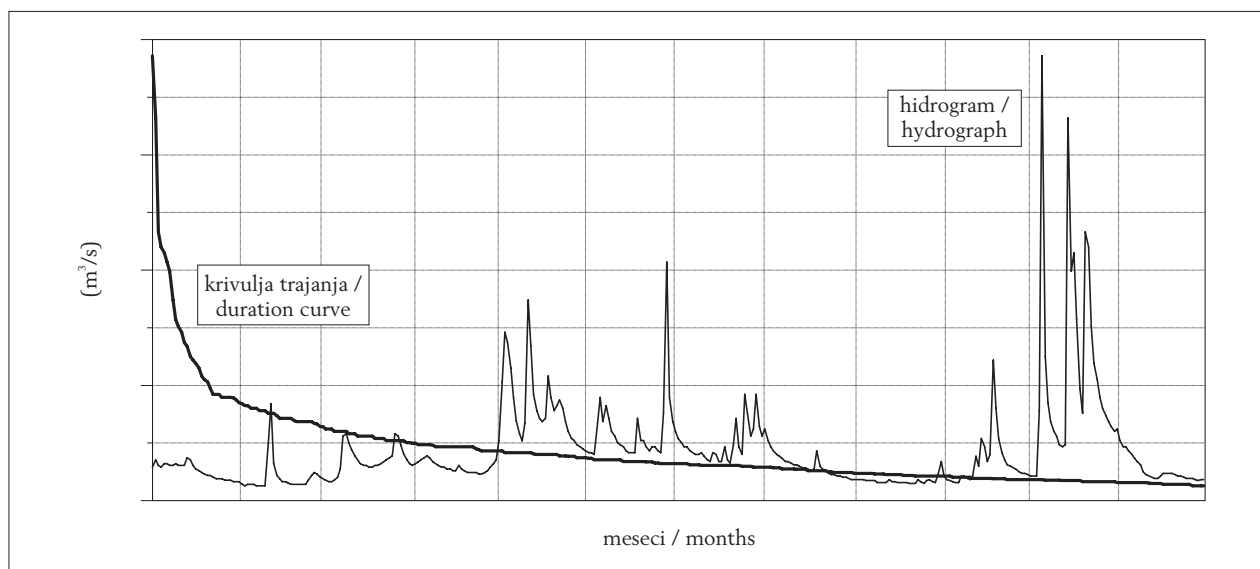

For the selected stations, the list of daily water levels, monthly and annual values, as well as level graphs are published in the annals. These data are the result of processing water-level recordings (all selected gauging stations are equipped with recorders). Daily values are mean daily water levels. They were the basis for calculating mean monthly and annual water levels (**Hs**). Both extreme values (**Hnk**, **Hvk**) are listed in the bottom part of the table.

In the level graph the year-round fluctuation of water level is shown with mean daily values.

A.5. Monthly and annual mean discharges with extremes

For the selected gauging stations monthly and annual mean discharges are listed in the table, as well as monthly, annual, and periodical registered extremes of the entire period of observation, excluding the current year. Discharges are not defined for the stations without discharge curve (stations on the lakes), or the latter is not defined for all water levels.

For those gauging stations which are equipped with water-level recorders (L type) or with data logger (P type) or stations with near real time data transfer (A type), monthly and annual values are defined or calculated on the basis of analog or digital level graph and the corresponding discharge curves. **Qnk** stands for low monthly discharge, **Qs** for mean, and **Qvk** for high discharge. For those stations which are equipped with staff gauges (V type), monthly and annual discharges are defined on the basis of daily registrations of current water levels. **Qnp** stands for low, **Qs** for mean, and **Qvp** for high discharges.

so opremljene z limnigrafi). Dnevne vrednosti so srednji dnevni pretoki, ki so določeni na osnovi srednjega dnevnega vodostaja (Hs) in ustrezne pretočne krivulje. Iz njih so izračunani srednji mesečni in letni pretoki (Qs), ki so skupaj s skrajnimi vrednostmi (Qnk, Qvk) natisnjeni v spodnjem delu preglednice.

V hidrogramu je s srednjimi dnevnimi vrednostmi prikazano spreminjanje pretoka v letu (m³/s). Izrisana je tudi krivulja trajanja. Pod grafom so izpisani značilni pretoki po trajanju (Q₀, Q₃...). Izvedeni so iz srednjih dnevnih vrednosti.

A.7. Mesečne in letne srednje temperature vode s konicami

Za vodomerne postaje na katerih merimo temperature vode so prikazane mesečne in letne srednje vrednosti ter mesečne, letne in obdobjne zabeležene konice celotnega obdobja opazovanj, brez tekočega leta. Na merilnih mestih z zveznimi meritvami beležijo temperaturo elektronski merilniki (tip = A), opazovalci (tip = O) pa opravijo meritve z alkoholnim vodnim termometrom enkrat dnevno. Zaradi primerljivosti so v tabeli ne glede na tip postaje objavljene vrednosti, ki so izvedene iz odčitkov ob 7. oz. 8. uri. Tedaj meri temperaturo večina opazovalcev. Iz odčitanih vrednosti so določene maksimalne in minimalne ter izračunane povprečne mesečne in letne temperature vode. Letni ekstremni temperaturi (minimum in maksimum) sta določeni z datumom.

A.8. Dnevne temperature vode s termogramom (°C)

Za izbrane postaje je v letopisu objavljena preglednica s srednjimi dnevnimi temperaturami vode, mesečnimi in letnimi vrednostmi ter termogramom. V termogramu je s srednjimi dnevnimi vrednostmi prikazano spreminjanje temperature vode preko leta.

Annual values are listed separately, and dates are added to both extremes.

Registered extremes in the observation period are marked with nQnk and vQvk for the stations with recorders, and with nQnp and vQvp for the stations with staff gauges. In the Borl gauging station, the stated extreme values apply to period after the year 1989 when the station was put into operation again. In 1981, the observations were stopped for the next eight years, and the data after the year 1989 are not comparable to the old data due to the operation of the Formin hydro-power plant.

A.6. Daily discharges with hydrograph and duration curve

In the annals the tables are published for the selected stations, with daily discharges, monthly and annual values and the hydrographs with duration curves. These data are the result of processing water-level recordings (all selected stations are equipped with recorders). Daily values are mean daily discharges which were defined on the basis of mean daily water levels (Hs) and the corresponding discharge curves. From them, mean monthly and annual discharges (Qs) were calculated which are, together with extreme values (Qnk, Qvk), listed in the bottom part of the tables.

In the hydrograph, the annual discharge fluctuation is shown through mean daily values (m³/s). The duration curve is also plotted. Below the graph, typical discharges as to duration (Q₀, Q₃...) are listed. They were derived from mean daily values.

A.7. Monthly and annual mean water temperatures with extremes

The table shows monthly and annual mean values and the monthly, annual and periodical recorded peaks of the entire period of observation, excluding the current

A.9. Dnevne vsebnosti suspendiranega materiala z diagramom (g/m³)

Transport suspendiranega materiala je bil merjen na vodomernih postajah. Vzorce za določanje vsebnosti zajemajo enkrat dnevno. Na osnovi laboratorijsko določene vsebnosti v vzorcih in večkratnih profilnih meritev se določa srednja dnevna vsebnost suspendiranega materiala. Iz dnevni vrednosti se računajo povprečne mesečne in letne vsebnosti.

A.10. Dnevne količine transportiranega suspendiranega materiala z diagramom (kg/s)

V preglednicah so prikazane dnevne količine transportiranega suspendiranega materiala. Izračunane so iz dnevni vsebnosti suspendiranega materiala in srednjih dnevni pretokov. Iz dnevni vrednosti se računajo povprečne

year. Temperature is measured once a day with alcohol water dipping thermometer. Automatic measurement stations continually record water temperature using electronic sensors (type = A) whereas observers (type = O) perform measurements manually once a day using a liquid mercury thermometers. In the table, the temperature values obtained at 7 a. m. and 8 a. m. respectively are presented regardless of the type of measurement to make it possible to compare the values. This is the time at which most of the observers measure temperature manually. From the registered values, maximum and minimum values are derived, and mean monthly and annual water temperatures are calculated. Dates are added to both annual extreme (minimum and maximum) temperatures.

A.8. Daily water temperatures with graph (°C)

The Yearbook provides a table with data from selected stations, such as mean daily water temperatures,

ne mesečne in letne količine. Na diagramu so prikazane vrednosti srednjega dnevnega transporta (v kg/s).

monthly and annual values and a thermograph. The changing of the water temperature throughout the year is depicted in the thermograph using mean daily values.

A.9. Daily concentration of suspended material with graph (g/m³)

Transport of suspended material is measured at gauging stations. Samples for specifying concentration are taken once a day. On the basis of concentration in the samples, specified in laboratories, and several cross-section measurements mean daily concentration of suspended material was established. From daily values, average monthly and annual concentrations were derived.

A.10. Daily quantities of transported suspended material with graph (kg/s) and yearly transport (000 t)

Monthly and annual quantities of transported suspended material are listed in the tables. They are calculated from daily values; the latter are derived from the data on mean daily concentrations of suspended material and mean daily discharges. Daily values are shown on the graph.

* – postaja ima poleg karakterističnih tudi dnevne vrednosti za vodostaje in pretoke
 10197* – podatek je povzet iz Hidrološkega godišnjaka 1986
 93.99* – upoštevana je površina pojezerja, od tega odpade na površino jezera 3.15 km²
 8.38* – upoštevana je površina pojezerja, od tega odpade na površino jezera 1.42 km²

Pojasnila:

Vodostaj – vodostaj odčitán na vodomernu ob začetku meritve

Površina prečnega prereza – površina dela struge, ki ga zavzema vodni tok

Srednja hitrost – srednja hitrost vodnega toka

Opomba: ADMP = akustični doplerjev merilnik pretoka; FT = akustično hidrometrično krilo; kjer opombe ni, je bila meritev narejena s klasičnim hidrometričnim krilom

Explanation:

Water Level – Hight of water surface at gauging station read from a staff

Cross-Sectional Area – Area of river corridor

Mean Velocity – Theoretically determined value (Discharge divided by Cross-Sectional Area)

Comment: ADMP = Acoustic Doppler Current Profiler; FT = Ultrasonic Current Meter; no comment; measurement made with conventional (mechanical) current meter

A.3. Mesečni in letni srednji vodostaji s konicami (l. 2006)
